

Introduction to Fibre

Course duration: 1 hour

Course cost: This course is **FREE** to attend

This free hour long course is a basic introduction to FibreIRS where you will learn about some of the benefits of FireIRS systems.

You will be shown why fibre optic technology in the distribution of satellite and terrestrial signals can prove to be a simple and cost effective solution.

Learn the basics behind planning fibre system and let us show you how to how to trouble shoot and problem solve existing fibre systems.

Fibre doesn't have to be an expensive dark art, by understanding some basics it is possible to enter into this market with very little outlay.

Let us show you how, with some simple skills, fibre optic installations can work for you too.

You will be shown:

- Why choose Fibre
- Technology explained
- Basic Fibre designs
- Product selection
- Larger systems
- Multiple satellites
- Sky Q™ requirements

This course is intended for anyone wishing to enter into the world of fibre or would like some basic understanding of this technology.
