

# FREQUENCY SPECTRUM

The UHF TV Spectrum 471.25 - 693.25MHz is broken down into 40 Channels Numbered 21 - 48. Each channel is 8MHz wide. It is further broken down into colour coded groups, each coloured group is prefixed with a letter

**IMPORTANT NOTE:** Although there are no longer any digital multiplexes above Channel 48, Alltrade are continuing to offer W/B and 'T' band aerials as some of the K band aerials 'cut off' part of Channel 48 which can cause problems in certain areas. If 5G is present in these areas then we recommend using a Channel 48 5G filter on a W/B or T banded aerial.
