## “Fast Fit” Repair Kits

- 7-strand 18g galvanized lashing wire. The lashing wire is terminated at one end during manufacture, using an aluminium collar, to form the eyelet around the captive eye bolt.
- Pre-terminated “Fast Fit” kits offer a time saving option compared to traditional lashing repair kits, and help to ensure a robust installation.
- With just one eyelet to form, there is also a reduced risk of injury to the installers hands, from stray strands of lashing wire.
- Large galvanized steel corner plates for additional solidity and to prevent the lashing wire damaging the chimney mortar.
- Heavy duty “V” and “J” bolts.
- Industry standard nuts.

Product Code	Description
K6/F	Small Repair Kit With 1.75" V Bolts with Ferruled Lashing. For Masts Up To 1.5" O/D
