HOW DEFENDER WORKS?

Defender is a battery-operated, microprocessor-controlled fog generator, utilising the vaporise principle for efficient fog creation.

Its unique sleep mode drastically reduces power consumption, using only 1.5 milliamperes in stand-by, allowing about 250 hours of standby time on a 12ah battery.

Once installed and connected to the battery, Defender is armed when the vehicle is unattended.

Defender heats up to operating temperature in just 1 second from idle, demonstrating exceptional efficiency and readiness. Remarkable!

Defender activates upon intrusion detection, rapidly filling the space with fog that is odourless and leaves no residue. This swift action disorients thieves and provides a visual marker for their presence. Call us now!
