

PMS direct integration license per room (for Middleware Business or ArantiaCast server)

One-shot license that enables direct integration of the PMS (Property Management System) with Arantia TV and ArantiaCast services. It allows offering multiple features that enhance the guest experience and streamline hotel operations, such as automatic language adjustment based on guest preferences, billing of purchases made through Arantia TV, or deletion of guest data from the TV upon checkout.

One license is required per room and it is compatible with Middleware Business and ArantiaCast servers. The current list of compatible PMS systems can be requested from our team.

Ref.	830523
Logical ref.	APMS-PZ
EAN13	8424450318928

Packaging info

Unit	1 pcs.

Highlights

- Client check-in: When a new client registers on the PMS, the PMS sends Arantia TV the associated

guest data, such as name or language

- Moving guest (room change): When a guest changes rooms, the PMS sends Arantia TV the register required to move all the guest information from the previous room to the new one
- Guest change (guest's information modification: name, language...): If any piece of the guest's information changes, the PMS updates Arantia TV with the changes
- Easy publishing (client buys a service): When a guest buys a service using Arantia TV, the system sends the data associated with the operation to the PMS for the information to be included in the guest's bill
- Bill request (the guest requests a bill that is displayed on the television screen): the guest selects "Expenses" on Arantia TV to check his/her bill. Arantia TV sends the PMS the associated register to request the guest's expenses for that room, and the PMS sends the expense information back to Arantia TV to be displayed on the screen
- Text messages: The reception staff sends the final user a message via the PMS system interface. The PMS sends the message data to the Arantia TV system so the user can be informed. The user will be able to access the message at any time from the "Messages" menu
- Checkout: When a client leaves the hotel, the PMS sends Arantia TV the payment register and all the information associated with that guest is removed from the system
- Express checkout: The guest has the option to check out from their own room via the "Express checkout" menu. In this case, Arantia TV sends the PMS a request, which answers back whether the guest can do an express checkout or not (if there are any pending charges, for instance). The answer will display on the screen on whether the checkout was actually carried out or the guest still needs to visit the reception desk
- The integration with the PMS also includes other needed features, such as database synchronization
- Compatible with ArantiaCast professional casting system
- Compatible with Arantia TV service (requires Middleware Business server)
