

Introducing the

AUDIOMATE

Unleash Your Audio – TV, Turntable, Subwoofer

AUDIOMATE

HDMI & RCA Transmitter + Receiver

The AudioMate is a versatile add-on device that seamlessly integrates with Juke Audio's multi-room streaming amplifiers, enhancing audio flexibility. Once the mate is connected to the network, it can then perform key functions such as transmitting TV audio and analog audio sources to connected speakers, and outputting to powered subwoofers. Its small size allows it to fit into any environment and make for seamless enjoyment of all your audio equipment.

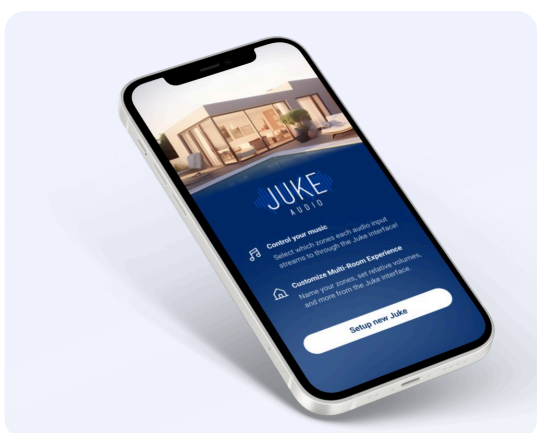

Enjoy Television Audio

- HDMI ARC / eARC input for connecting a television and wirelessly transmitting that audio to any Juke amplifier
- HDMI ARC / eARC output for doing a pass through to a optional sound-bar that plays in sync with the other speakers connected to the Juke amplifier

Make Your Audio Devices Smart

- RCA input for connecting in standard analog audio sources such as a record player and wirelessly transmitting that audio to any Juke amplifier
- RCA output for connecting powered subwoofers, amplifiers, or other third party devices to have them play in sync with the speakers connected to the Juke amplifier

Seamless App Control

- Preset your desired audio zones that you want either the RCA or HDMI input on the AudioMate to play to
- Create additional audio zones in the Juke Audio app for either the RCA or HDMI output that can be played to alongside any of the zones on the Juke amplifiers
