

Blake 1.5"-2" Dual-Coated Steel Gen 3 Starlink® Pole Mount Adaptor Bracket

Engineered for long-term reliability, the Blake UK Steel Generation 3 Starlink® Pole Mount Adaptor Bracket sets a new standard for weather-resistant satellite mounting hardware. The bracket is manufactured from strong mild steel and treated with an advanced dual-coating system, combining a durable plastic protective layer with a passivation treatment. This double barrier approach provides exceptional resistance to rust and wear, ensuring dependable performance in all climates, including coastal environments prone to high salt exposure.

The bracket has undergone extensive sea salt spray testing designed to replicate years of harsh outdoor exposure, confirming its ability to withstand demanding environmental conditions. The mounting assembly features precision-engineered knurled nuts that hold the dish firmly in place, reducing the risk of movement or misalignment over time. Its 20-degree mounting angle has been optimised for UK installations to help achieve a strong and stable signal.

The bracket supports both 2-inch and 1.5-inch poles, with an included collar adaptor to accommodate different mounting setups. Designed for professional installation yet cost-effective compared with alternative materials, it offers an ideal combination of strength, stability, and corrosion protection for Starlink® users seeking a permanent installation solution.

Pole Compatibility	1.5" (Using insert), 2"
Corrosion Resistance	Passivated & plastic coated for maximum protection
Mounting Angle	20°
Included in product:	1x Steel Starlink® Bracket 1x 1.5" Conversion Collar Insert 8x Tightening Screws (6x + 2x Spares) 2x Knurled Mounting Nuts 1x Alan Key
