

Callpoint Range

This addressable ASYRA wireless system creates a network of **2 to 254 elements around a master Callpoints** which can be placed in the center of the installation to double the maximum range. Two alarm channels can be paired on the same radio network to enable a wide variety of applications from simple wireless point to point alarm initiation for general safety applications to combined Fire alarm and lockdown alarms.

The ASYRA wireless callpoint is a manually triggered alarm. It is suitable for indoor and outside use (outdoor use requires clear polycarbonate housing covering). EN54 part 11 based design for familiar operational functionality. Encompasses signal strength and status LEDs for easy use and commissioning.

With the ASYRA wireless call point there is **NO NEED for a Control panel**, One singular call point creates a network of 2 to 254 elements with a **wireless Range of up to 1200m in free field (× 2 if master in the center)**. **Saving huge cost** as a control panel will not be needed.

All ASYRA wireless call points have built in NFC which allows them to connect to our **ASYRA wireless Android app**. This mobile application allows you to use your smartphone to communicate with a Master Callpoint to finely control your radio network. It allows among other things the naming of points, the display of detailed information such as battery status and the system actions log. To help identify device locations, it can ask a network element to emit a particular sound signal.

Key Features

Up to 4-year battery life using a single standard battery minimising maintenance cost.

Re useable call point – no glass

Wireless Range 1200m in free field (× 2 if master in the center)

Simple architecture with up to 254 devices on one master device.

AES encrypted radio network

Quick First fix installation

Reusable manual trigger alarm, no breaking of glass allows for re use with a plastic key to reset the device.

The **easy to use pairing feature** allows for quick and simple set up combined with a **4 year Standard battery life** means **lower installation and maintenance costs**.

Key Benefits

Minimises maintenance.

Lower installation costs

One unit suits many applications

Simple set up and use

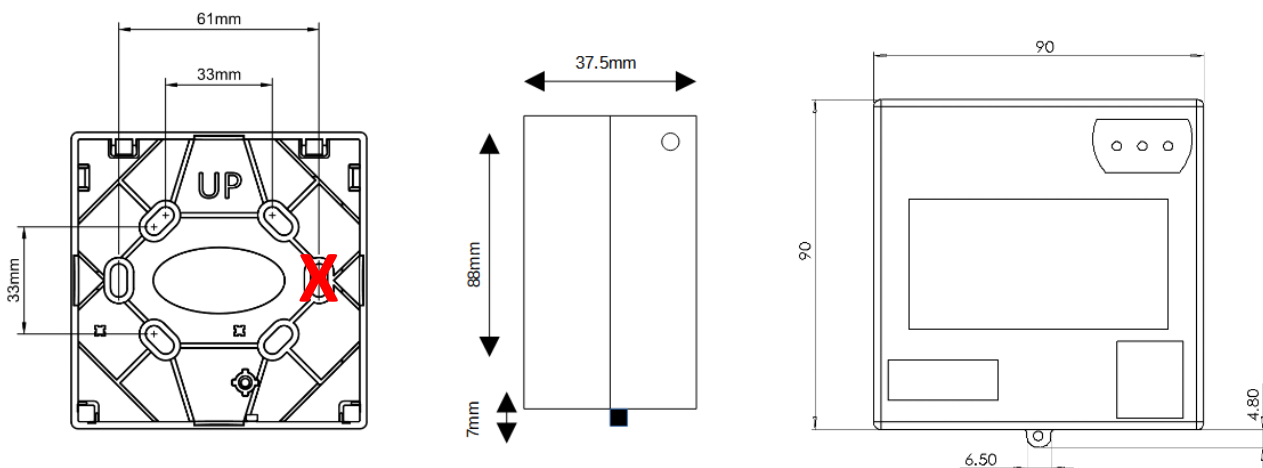

Re-usable

Applications

Offices, Retail outlets, Hospitals, Universities, Commercial, Industrial sites, Schools, complex sites and open area locations.
