

Dual Designer Emitter Twin Plug

Blink-IR™ INSTALLATION INSTRUCTIONS

DESCRIPTION

The 283TPD "Twin-Plug" Designer Emitter is based on Xantech's standard 283D Designer Emitter with two 3.5mm Mono-Mini plugs each with 'diode' isolation. The twin plug feature allows a single emitter to be shared by two IR sources. For instance, one mouse emitter can now be connected to both an IR receiver and a Xantech Multi-Zone Controller without having to place two emitters on the front of the IR controlled source component.

Internally, the 283TPD contains components that are designed to keep the IR signal path directed towards the emitter only, allowing both control systems to be completely isolated. The plugs are gold plated to increase durability and connectivity.

INSTALLATION

ATTACHING THE EMITTERS TO IR SENSOR WINDOWS

- Each emitter has a clear adhesive layer on the bottom flat surface of the shell.
- Simply peel off the adhesive cover and affix the emitter to the center of the IR sensor window on the controlled component's front panel.

- In some cases it may be difficult to find the location of the IR sensor on the component. Consult the owner's manual of the unit, or the manufacturer, for the exact IR sensor window location.
- Double-sided adhesive tape is included. If you move the emitter to a different component, use this tape to replace the current adhesive layer for the best adhesion.
- The shell, though dark in appearance, is transparent to infrared light, allowing commands from a handheld remote control to pass through it. This permits direct control of the equipment from a handheld remote as well as from the 283TPD.

BLACK (IR OPAQUE) EMITTER SHIELD

 An optional shield, available from Xantech as model 28DES, fits over the emitter head and the sensor window of the controlled component. It prevents unwanted external IR signals from passing through or leaking past it.

find the location of the IR sensor

The setup below shows two IR signals connected to a single source. This allows the source to be controlled from two areas. One mono plug goes to

Home Theater \ Multi-Room Controller

INSTALLATION SETUP #1

INSTALLATION SETUP #2

Expanded Multi-Room Controller The setup below shows two MRAUDIO4X4 Controllers connected in Expansion mode. Expansion mode doubles the number of zones while using the same number of sources. The benefit of the 283TPD is that you only need to place one emitter at each source. One mono plug is connected to the 'master' controller. The other mono plug is connected to the 'slave' controller. This application can apply to the entire product line of Xantech controllers.

MRAUDIO4X4CTL or BXAUDIO4X4CTL (master)

Limited Warranty

Xantech® warrants its products to be free of defects in materials or workmanship. This is a Limited Lifetime warranty from the date of purchase by the original consumer. Any products returned to Xantech and found to be defective by Xantech within the warranty period will be repaired or replaced, at Xantech's option, at no charge. Xantech will not be responsible for the actual cost of installation or removal of the product, nor for any incidental or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation may not apply to you. This warranty gives you specific legal rights. You may have additional legal rights that vary from state to state.
